Serie Norma Plast®

Caratteristiche generali

| | |
|--------------------------------|---|
| Applicazioni | Connessione di tubazioni di gas e fluidi a bassa pressione e tubazioni sottovuoto |
| Materiali | Raccordi terminali filettati: PA6 grigio scuro (Poliammide) Raccordi intermedi: POM bianco (Resina acetica) |
| Temperatura d'esercizio | 20 ÷ 50°C |
| Proprietà meccaniche | I raccordi NormaPlast® sono noti per la loro stabilità, durata, leggerezza, resistenza al grippaggio e resistenza ai colpi. La particolare forma del codolo (dentellatura) garantisce una forte connessione fra il tubo e il raccordo |
| Proprietà termiche | Per le parti di connessione filettate il coefficiente di espansione 100×10^{-6} dei materiali deve essere accuratamente considerato dove l'applicazione è sottoposta a variazioni di temperatura |

NB: Filettature metriche e NPT sono fornibili a richiesta e per confezioni.

Caratteristiche generali

Frenafiletti

Per bloccare e frenare le parti di fissaggio filettato (viti, dadi, bulloni, ect). Impedisce l'allentamento spontaneo dovuto a vibrazioni e/o urti, riempie i giochi tra gli accoppiamenti filettati, bloccandoli permanentemente.

Sigillafiletti

Per sigillare raccordi filettati a tenuta idraulica. Resiste alle vibrazioni ed agli urti, facilita l'avvitamento delle parti filettate, garantisce un facile smontaggio e protegge gli accoppiamenti filettati dalla corrosione.

Teflon liquido

Per sigillare accoppiamenti piani e giunzioni flangiate. Forma una guarnizione flessibile, garantendo una sigillatura perfetta tra i componenti

E' di fondamentale importanza la corretta considerazione dei giochi, ne consegue una corretta scelta della viscosità.

R150

Frenafiletti

Debole resistenza. Per frenare piccole viti di registro e di assemblaggio che possono essere soggette a regolazione o a facile smontaggio.
